The argument that, as shown in example C, the catalyst of Verduijn-1 (U.S Patent No. 5,396,009) would not have the claimed dimensions since the catalyst comprises divalent cation is not persuasive. Verduijn-1 teaches the claimed process utilizing a catalyst having the claimed dimensions and also teaches that the alumium may be substituted by gallium (See col. 5, lines 1-25; col. 6, lines 7-11). The importance of answering applicant's arguments is illustrated by In re Herrmann, 261 F.2d 598, 120 USPQ 182 (CCPA 1958) where it was constrained to accept the statement at <u>face value</u>. See also In re Soni, 54 F.3d 746, 751, 34 USPQ2d 1684, 1688 (Fed. Cir.1995).

The argument that either Verduijn-2 or Verduijn-3 teaches the claimed catalyst is not persuasive because Verduijn-1 already teaches a catalyst having the claimed dimension and comprising gallium.
